

## **Smooth Bore Insert Kits**

# #F140SBI

TFT introduces a NEW compact way to combine a smooth bore, shutoff, and fog nozzle. TFT has improved the unimprovable by placing the smooth bore nozzle INSIDE the actual valve ball, reducing the weight and length of the total assembly. Smooth bore insert kits come standard with 7/8", 15/16", and 1.0" smooth inside tapers. The changeover from one size to another may require a tool to push out the insert. Simply slide the insert out the BACK of the valve and slide in the new size. Apply a lubricant to o-rings prior to installation.

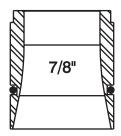

To install insert:

- 1) Open valve fully.
- 2) Place retaining ring into groove in the valve ball nearest the discharge end of the valve.
- 3) Apply lubricant to o-ring.
- 4) Slide desired insert into ball from inlet end of valve until in contact with retaining ring.

Operation: Open valve fully to discharge solid stream, or use with combination nozzle on discharge of valve.

### **ACAUTION**

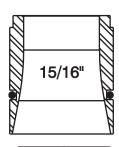

Waterway is restricted to a reduced size. Delivery of water is limited by size of insert used. When this device is used in-line to feed hose or nozzle, it will effectively change the size of the valve to the size of the installed insert.

# VIT Nozzles

VALVE INTEGRAL TIP

H-VIT H-2VIT H-VITG H-2VITG H-2VPPIT

TFT introduces a NEW compact way to combine a smooth bore, shutoff, and fog nozzle. TFT has improved the unimprovable by placing the smooth bore nozzle INSIDE the actual valve. VIT nozzles come standard with 7/8", 15/16", 1.0" and 1-1/8" smooth inside tapers. The changeover from one size to another may require a tool to push out the insert. Simply slide the insert out the BACK of the valve and slide in the new size. Apply a lubricant to o-rings prior to installation.

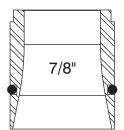

Smooth bore inserts are designed to fit Task Force Tips VIT series ball valves. Models: H-VIT, H-2VIT, H-VITG, H-2VITG, H-2VPPIT

#### To install insert:

- 1) Apply lubricant to o-ring.
- Slide desired insert into the discharge end of the valve till insert passes ring groove.
- 3) Place retaining ring into groove in the front ring.
- 4) Slide insert forward to retaining ring.

**Operation:** Open valve fully to discharge solid stream, or use with combination nozzle on discharge of valve.
